Service

Connected for the future

Top-level connectivity

Business processes are rapidly migrating into the digital world, opening the doors to enormous potential for growth and competitive edge. In this environment, connectivity – global networks between locations, partners, service providers, customers and more – becomes one of the most important challenges faced by corporate IT, and a key factor driving success in the future.

Telehouse sets up the conditions you need. Our data centre offers a range of options for global connectivity, built on the latest technology, maximum availability and top performance.

You can take advantage of various connectivity options: direct connection to the “outside world” using a carrier of your choice represented in our data centre; connection to your business partners, markets, Internet service providers, carriers, cloud providers etc. via our own platform, Telehouse Connect; or the best of both worlds.

Whatever decision you make, our data centre offers unlimited freedom of choice and top-quality infrastructure, services and performance you can rely on.

Try us today!

Your benefits with Telehouse

Rapid, secure and flexible access to global networks

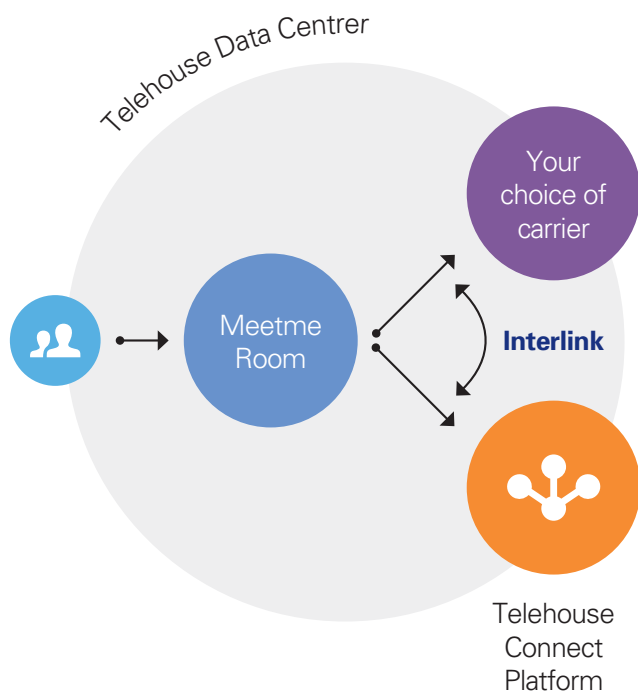

Telehouse operates more than 40 own data centres throughout Asia, Europe, Africa and the USA. As a subsidiary of KDDI Corporation (Japan's second largest telecoms company), we provide telecoms services in over 170 countries. We know exactly how connectivity works – and you benefit from our expertise!

- Our data centres are 100% vendor-neutral, allowing you to decide flexibly whether to connect with the world directly using a carrier of your choice – all major global carriers are represented with us – or use Telehouse Connect, our own 24/7 managed platform.
- Connection to the world's major Internet exchange nodes – De-CIX, LINX, France-IX, NYIX, Tokyo-IX.
- Connection to various cloud exchange platforms with direct access to numerous cloud providers.
- Telehouse's data centre at Frankfurt a. M. is among Germany's largest and most modern, with a data operations area of approx. 50,000 sqm. Power supply and air-conditioning are designed as multiple redundant systems to maximise continuous operational security and availability.
- As a subsidiary of KDDI Corporation, we are integrated into the structure of a leading global network provider. We benefit from our parent company's long-standing experience and expertise in this environment, as well as from its financial stability and sustainable growth strategy. You can be sure we'll still be there for you tomorrow!
- We combine network and data centre expertise to give you the best of both worlds – connectivity and colocation services for your IT infrastructure from a single source, under a single roof. A level of flexibility you won't find from any other provider!

Our
data center:
**100% carrier-
neutral.**

Comprehensive support, extensive expertise

Getting you fit for the future

Connectivity is the key to getting your company fit for digitalisation throughout all business processes. We provide the preconditions you need. As pioneers in data centre services since 1989, we rent space for IT operation and support our customers in all areas, generating sustainable advantages in efficiency, costs and competitive edge.

With many years of experience in the connectivity sector, our specialists ensure that today's technologies, concepts and methods are quickly incorporated throughout our portfolio of services to benefit our customers.

About Telehouse

Telehouse operates more than 40 own data centres in Asia, Europe, Africa and the USA. As subsidiary of KDDI Corporation, Japan's second largest telecoms company, we supply IT and telecom services on a global scale in over 170 countries.

As authentic pioneers of data centre-based IT services – we opened the world's first location dedicated to this purpose in 1989 – we are a well-established partner offering a wealth of market and technology expertise for all challenges and dimensions of data centre services related to cloud computing, colocation, system integration and connectivity.
